Skalenniveaus der Daten

Item (Kategorie)	Skalenniveau
AbiLand	Nominal
AbiBL	Nominal
sex	Nominal
LK_Mat	Nominal
LK_Phy	Nominal
LK_Inf	Nominal
GK_Inf	Nominal
Abinote	Ordinal
SK_Mat	Ordinal
SK_Inf	Ordinal
BM_Inf	Ordinal
BFI_K	Ordinal
LMI	Ordinal
Ktyp	Ordinal
Kurs_Inf	Intervall
Std_Inf	Intervall

Hinweise:

für nominalskalierte Variablen wird ein Chi-Quadrat-Test auf Unabhängigkeit durchgeführt für ordinalskalierte/Intervallskalierte Variablen wird die Spearman-Rangkorrelationen mit Tie-Correction berechnet.

Zusätzlich werden die Konfidenzintervalle auf 95%-Niveau angegeben

Insgesamt werden die Korrelationen angegeben für:

- 1. Programmierung 1 (bestes Ergebnis 1=bestanden/0=n.bestanden aus Haupt-/Nachklausur WS2018/19 und WS2017/18)
- 2. MfI 1 (bestes Ergebnis 1=bestanden/0=n.bestanden aus Haupt-/Nachklausur WS2018/19 und WS2017/18)
- 3. bestes Ergebnis 1=bestanden/0=n.bestanden
- 4. Anzahl bestandener Vorlesungen 0=keine VL bestanden, 1= eine Vorlesung bestanden, 2= beide Vorlesungen bestanden

1. Programmierung 1

Nominalskalierte Variablen

Item	Chi-Quadrat-Wert	p-value
LK_Mat	4.13	0.39
LK_Inf	0.50	0.97
LK_Phy	0.03	0.99
sex	0.42	0.98
AbiLand	2.25	0.69
AbiBL	12.20	0.99
GK_Inf	2.22	0.69

Ergebnis: signifikanter statistischer Zusammenhang kann für kein Item angenommen werden. Leistungskurs Mathe scheint jedoch förderlich zu sein

Ordinalskalierte Variablen:

Variablen mit Rangkorrelationen |r|>0.15:

, arrabicii iiiit rangii	irelationen 1 0.10.

Im Folgenden werden für die verschiedenen Bereiche Korrelationsmatrizen inklusive p-value-Matrizen angegeben

Persönlichkeitswerte:

=> lediglich Gewissenhaftigkeit ist interessant

Leistungsmotivationsinventar:

Selbstkonzepte:

=> Selbstkonzept in Mathematik scheint wichtiger zu sein, Informatik gerade so nicht statistisch signifikant

Kongruenzen:

=> anforderungsbasierte Kongruenz etwas wichtiger, psychosoziale gerade so nicht statistisch signifikant (vernachlässigbar)

Folgenanreiz Beruf:

=> scheint nicht relevant

Folgenanreiz intellektuell:

=> scheint nicht relevant

<u>Tätigkeitsanreiz</u>:

=> scheint nicht relevant

Image:

=> scheint nicht relevant

berufliches Selbstkonzept:

=> von allen Berufsmotivationen am relevantesten (17 und 18)

Besondere für Arbeit:

2. MfI 1

Nominalskalierte Variablen

Item	Chi-Quadrat-Wert	p-value
LK_Mat	9.53	0.05
LK_Inf	0.02	0.99
LK_Phy	3.80	0.43
sex	2.39	0.66
AbiLand	0.76	0.94
AbiBL	19.01	0.52
GK_Inf	1.64	0.80

Ergebnis: leicht signifikanter statistischer Zusammenhang mit Leistungskurs Mathe (nicht verwunderlich, da Mathematik VL)

Ordinalskalierte Variablen:

Variablen mit Rangkorrelationen |r|>0.2:

Korrelation	untere Grenze	obere Grenze
0.345345	0.179985	0.491723
